Source: Bank of Ghana, Bloomberg
Note: Year-to-date computation = (Exchange Rate in December of the previous year / Exchange Rate of the current period - 1)*100.

[10] All exchange rates are mid-rates (buying and selling) as of end of the month. The last data observation is as at Friday, 17th July 2026.
[11] The Real Effective Exchange Rate is a weighted average of the Ghana Cedi relative to a basket of 18 trading partner currencies, adjusted for inflation. The weights are determined by the respective shares of the 18 trading partners in Ghana's total trade (An increase = depreciation, decrease = appreciation).
[12] The US Dollar Index measures the value of the US Dollar against a basket of 6 leading global currencies. A rise in the Index means the US dollar is strengthening.
[13] The Emerging Market Currency Index tracks 10 liquid currencies across Latin America, Asia, Central and Eastern Europe, Middle East and Africa against the US Dollar. A drop in the Index means that emerging market currencies are weakening, while an increase signifies strengthening of the currencies.
